EDUCATION

Vellore Institute of Technology 2025 – Present
B.Tech in Computer Science and Engineering *CGPA*: 9.51
Coursework: OOP, Data Structures & Algorithms, Operating Systems, Computer Networks, Software Engineering

EXPERIENCE

AI Engineering Intern May 2026 – August 2026
HealthPlix *Bangalore, Karnataka*

- Deployed LLM-powered RAG clinical reasoning pipelines, improving patient wellness insight relevance by 38%.
- Architected a Neo4j knowledge graph integrating ChEMBL, Open Targets, and PubMed for drug repurposing.
- Built a graph reasoning engine using direct target overlap and 2-hop PPI proximity with weighted scoring.
- Optimized retrieval pipelines, cutting API latency 45% to sub-120ms with hallucination guardrails.

PROJECTS

graVITas'26 Flagship Festival Portal (Live) *Go (Golang), React, Next.js, PostgreSQL, Redis, GSAP*

- Developed core full-stack features for VIT's flagship international fest portal for **25,000+ participants**.
- Built scalable **Go (Golang)** event services with optimized REST API endpoints for discovery, categories, and schedules.
- Optimized PostgreSQL multi-column indexing and Redis caching, cutting DB load ∼40% at $<$ 100ms latency.
- Crafted responsive, accessible React/Next.js, Tailwind CSS, and GSAP UI modules for cross-device performance.

DevJams'26 Platform (Live) *React, Next.js, TypeScript, Tailwind CSS, GSAP*

- Architected the GDG-VIT flagship 48-hour hackathon platform, scaling to support **4,000+ registrations**.
- Engineered an interactive submission portal and live review dashboard with multi-stage form validation.
- Implemented high-performance 60 FPS visual storytelling using GSAP animations and Lenis smooth scrolling.

Mira 2.0 (GitHub) – AI-Powered Virtual Garment Try-On *PyTorch, Diffusion Models, OpenPose, FastAPI, React*

- Engineered a generative AI try-on engine using diffusion-based garment warping and pose estimation.
- Preserved fine fabric textures and spatial draping, reducing geometric distortion artifacts by 40%.
- Deployed an asynchronous FastAPI REST API microservice with GPU batching, generating high-res previews in $<$ 3s.

RoboSurge (GitHub) – Agentic AI Dual-Arm Surgical Robot *Python, YOLOv8-Pose, Groq, OpenCV, ESP32*

- Built a dual-arm robotic system translating natural-language commands into validated trajectories.
- Engineered a real-time vision pipeline using **YOLOv8-pose** and HSV fiducial detection.
- Integrated an LLM planning agent with a mathematical **ProcedureValidator** for workspace safety.
- Streamed 10 Hz waypoints to ESP32 microcontrollers executing real-time inverse kinematics.

LEADERSHIP & ACTIVITIES

Google Developer Groups On Campus - VIT Vellore January 2026 – Present
Full Stack Developer

- Selected out of **300+ candidates** who applied to join the Full Stack development team.
- Developed the official portals for DevJams'26 and the upcoming GDG recruitments platform.
- Hosted and coordinated flagship events, including WomenTechies'26 and DevJams'26.

SKILLS

Languages: Go (Golang), TypeScript, JavaScript, Python, SQL, Java, C/C++
Frontend: React, TanStack, Next.js, TypeScript, Tailwind CSS, GSAP
Backend & APIs: Go (Golang), REST APIs, GraphQL, Microservices, Node.js, Express, FastAPI, Flask
Databases: PostgreSQL, MySQL, MongoDB, Redis, Neo4j
Cloud & DevOps: AWS, GCP, Docker, Kubernetes, CI/CD, Git, GitHub, Linux, Postman, pytest
AI & Machine Learning: PyTorch, TensorFlow, Scikit-learn, OpenCV, YOLOv8, LLMs, RAG
